SECURITY RISK ASSESSMENT

FROM GENERAL SECURITY MEASURES TO APPROPRIATE SECURITY THROUGH RISK ASSESSMENT

Security often starts with a set of standards. By implementing these standards you reach a general level of security in your organization. But, is this level of security sufficient for your organization? With appropriate security you implement only the specific measures that are suited to protect the information within your organization. No business is the same and therefore appropriate security is unique for each organization.

SECURITY AND RISK MANAGEMENT

To discover which security measures are best suited for your organization, performing a proper risk assessment is fundamental. Which security measures you implement are largely based on the risks you are willing to accept. But, how do you decide which risks are acceptable for your organization? Let Audittrail professionals help you perform a Risk Assessment that will help you appropriately secure your information.

APPROPRIATE SECURITY MEANS LESS PRESSURE ON THE ORGANIZATION, AS WELL AS MINIMIZING FINANCIAL IMPACT

RISK ASSESSMENT

Conducting a proper risk assessment in relation to information security requires expert knowledge on the subject. Let our security- and risk management experts guide you throughout this process. They will confer with you to determine the parameters of your security. By interviewing process managers all potential risks are collected and a comprehensive overview of all risks is created. This overview will help you in assessing which risks you will accept, and which you choose to mitigate through implementation of security measures. Of course, we will share and transfer additional insights and knowledge on risk assessment, and make sure that once our experts leave you will be able to perform analyses individually. Easy does it!

BENEFITS

- Risk assessment on process-level;
- Pragmatic reporting and overview;
- Knowledge transfer to enable future individual risk assessments.
